

Indem

AI-native insurance brokerage for small fleets

Agents maintain the account. Licensed brokers make the decision.

Independent rental fleets first

THE ORIGIN

Our fleet waited weeks for a commercial quote.

The fleet already had the evidence. The insurance process could not use it efficiently.

Trip histories and vehicle schedules
Maintenance and repair records
Policies, loss runs, photos, and email

Brokers had to reconstruct the account by hand before they could approach carriers.

**30 vehicles
1 fragmented risk
story**

THE INSIGHT

Small fleets are not always bad risks. They are under-observed risks.

The fleet creates evidence every day. Insurers often see only an annual application and loss runs.

EVERY DAY

drivers | trips | maintenance | damage

AT RENEWAL

forms | spreadsheets | email | follow-up

Indem turns daily operations into an underwriting-ready account.

THE PRODUCT

One continuously maintained, source-linked risk file.

Fleets connect their records once. Indem keeps the account ready for placement, servicing, renewal, and claims.

The screenshot displays the Indem AI review interface. At the top, the Indem logo and 'PRODUCT WALKTHROUGH - FOUNDER-FLEET MODEL' are visible. The main heading reads 'From scattered records to broker-ready risk.' Below this, a sidebar on the left shows the 'ACCOUNT WORKFLOW' with steps: Intake, AI review (highlighted), Risk file, Broker review, and Continuous. The main content area is titled 'INDEM AI' and 'Resolve the account before a broker touches it.' It features a large '91%' account readiness metric, noted as 'Up from 62% at Intake'. To the right, a 'REVIEWING' section lists four steps: 01 Extract (Read policy limits and vehicle schedule, Current policy, status: ✓), 02 Match (Linked 30 VINs to trips and maintenance, 3 source systems, status: ✓), 03 Verify (Confirmed 29 ownership records, Vehicle schedule, status: ✓), and 04 Flag (Found one prior-loss timeline to confirm, Vehicle 17, status: ⚠). A 'Run walkthrough' button is located in the top right of the main content area.

01 Find gaps

Detect missing or conflicting evidence.

02 Link sources

Keep every field traceable to its origin.

03 Escalate

Route uncertain decisions to a licensed human.

THE OUTPUT

A risk file a broker can trust.

Not a generic summary. Every material field is structured, checked, and linked to evidence.

Vehicle schedules and ownership

Driver and trip activity

Maintenance and loss history

Coverage states and controls

Indem

PRODUCT WALKTHROUGH - FOUNDER-FLEET MODEL

Back to Indem

From scattered records to broker-ready risk.

Names, dates, and values are anonymized or illustrative.

Vehicle 17 - prior loss needs context

Run walkthrough

ACCOUNT WORKFLOW Reset

- Intake

- 05 Continuous

Founder Fleet 01 / Risk file

SOURCE-LINKED RISK FILE

The account explains itself. 91 / 100

RISK FIELD	CURRENT FACT	EVIDENCE	STATUS
Vehicle schedule	30 of 30 matched	AutoSeek + titles	VERIFIED
Usage	Rental and direct-trip mix	312 trip records	VERIFIED
Maintenance	All vehicles on schedule	86 service records	VERIFIED
Loss history	One item needs context	Carrier loss run	REVIEW

Reusable at endorsement, renewal, and claim

Agents do the evidence work. Licensed brokers own the judgment.

AI

Collects and verifies records
Prepares carrier-ready submissions
Drafts servicing actions

LICENSED PARTNER

Recommends coverage
Negotiates with carriers
Approves and binds

From a one-time application to a living account.

Indem monitors authorized changes between renewal dates, so the broker does not rebuild the risk from zero.

Faster

submission and renewal preparation

Current

Defensible

source-linked evidence after a loss

THE MARKET

A \$61.8B commercial-auto market, entered through one sharp wedge.

\$61.8B

2024 U.S. commercial auto net premiums written

We start where we have unfair access and expand along the same data model.

Long term: use proprietary operating and loss data to move from brokerage into MGA and carrier economics.

THE BUSINESS MODEL

Recurring revenue when coverage is placed and renewed.

ILLUSTRATIVE UNIT ECONOMICS

\$50K premium x 12% commission pool x 50% partner share

~\$3K

annual Indem revenue per fleet

Renewals recur annually. Larger fleets and higher premiums increase revenue per account.

Built inside the customer business, before launch.

The first design environment is Fan's own 30-vehicle rental fleet.

30

vehicles in the live design environment

1,000+

customers served by AutoSeek

2

external fleets interested as design partners

5

core product workflows prototyped

Now

Validate placement end to end with licensed brokerage partners, then onboard external fleets.

The gap sits between fleet software and insurance placement.

USES LIVE OPERATING DATA

Fleet software

Operational data
No placement

Indem

Continuous risk file
+ licensed placement

Point tools

Documents or claims
One workflow

Traditional brokerage

Placement expertise
Manual account work

Founder-operated fleet + production AI + financial-risk expertise

OWNS THE INSURANCE OUTCOME

THE TEAM

We own both sides of the problem.

Yudong Rao

Co-founder & CEO

3 years in IMF sovereign lending and safeguards
WashU Economics PhD under Philip Dybvig
Built Swap Line Watch; owns risk and go-to-market

Fan Yang

Co-founder & CTO

7 years building production AI at Google
Operates the 30-vehicle fleet
Built AutoSeek for 1,000+ customers

NEXT 12 MONTHS

**Launch through a
licensed partner**

**Place the first 100
policies**

**Prove faster quote time and
better bind economics**

We are turning a live founder-fleet system into a national brokerage for small commercial fleets.
