Indem

AI-native brokerage and risk modeling

for Physical AI in everyday life

Brokerage today. Risk models built through data and validation.

Annie
Co-founder & CEO

Investor presentation
October 10, 2026

Our page

Indem

The next 20 to 30 years of everyday life

will look completely different.

Robots in our factories, homes and hospitals.
Autonomous vehicles on our roads.

Businesses need insurance to deploy robots.
Underwriters need evidence to assess their risks.

Indem connects the two.

Indem

The insurance access gap

Demand needs a route to coverage

DEMAND

Businesses ready to operate

Rental fleets
Commercial robotics
AI infrastructure

THE GAP

Hard to place

Limited loss history
Unclear operating risks
Narrow market appetite

SUPPLY

Insurers need risks they can assess

Defined use and exposure
Credible operating records
A fit with market appetite

Indem's brokerage layer

Risk Passport turns operating data into underwriting evidence.
Licensed brokers match eligible risks with markets and manage placement.

Indem

The brokerage and risk-modeling layer

Insurance built on operating evidence

AI-native brokerage

AI-assisted intake and submissions
Licensed broker review
Placement and renewal service

Risk Passport

Customer-authorized records
Operating scope and exposure
Underwriting-ready evidence

Risk modeling

Exposure-linked loss histories
Models tested against outcomes
A long-term research program

Brokerage today. Data partnerships and model validation as we grow.

Indem

Robotics submission workflow

One deployment, one risk record

Our goal: a complete submission in three days.

Scope	Define the risk	Tasks, site, responsible parties and operating limits
Evidence	Prepare evidence	Supervision, changes, maintenance and incidents
Review	Request terms	Coverage review and terms for eligible operations
Measure	Record outcomes	Quote, bind, retained commission and review effort

Coverage remains subject to eligibility, licensed access and underwriting.

Indem

Real deployment needs

Making the future insurable

5 robotics clients

Clients from China, Singapore, Australia and the U.S.

Supporting insurance needs for U.S. deployments, including planned operations at Walmart and UPS sites.

Planned client sites, not Indem customers or partners.

Rental fleets

50+ rental fleets seeking coverage

Real clients to test and improve our AI submission workflow.

Indem

Our long-term data asset

Evidence linked to outcomes

Working today

Asset-linked source records
Dated imports and review flags
Reusable underwriting packages

Planned data integrations

Operator exports and approved APIs
Usage and intervention records
Policy terms and loss outcomes

Which controls reduce risk, and which evidence changes underwriting?

Customer permission and data agreements govern access, sharing and model development.

Indem

Revenue and reinvestment

Brokerage with a modeling ambition

Premium placed **X** Retained commission rate **=** Indem revenue

On eligible placements and renewals

Our priority: data acquisition and validated learning alongside commission revenue.

Retained rate is after intermediary splits. Service and acquisition costs still come out of revenue.

Indem

Why this team

Research meets operating experience

Annie

Co-founder & CEO

WashU PhD student
LLMs, sovereign lending
& risk pricing at the IMF

Fan

Co-founder & CTO

7 years of AI at Google
Co-founded Autoseek
Bay Area rental-fleet platform
Operates a private 30-car fleet

Aaron

COO & Founding Broker

Arcadia Insurance Group
14-year family brokerage
18 staff at Arcadia

Philip — Advisor

2022 Nobel Laureate in Economic Sciences
Annie's PhD supervisor

Indem

$500,000 pre-seed

Data acquisition and validation

01 Secure deployments and permissioned data access

02 Link exposures to underwriting and renewal outcomes

03 Test risk hypotheses and measure placement economics

$100,000 angel investment received. Delaware C-corp.

Building insurance infrastructure for Physical AI in everyday life.

Indem

Risk Passport in action

Evidence for underwriting

Source-linked facts
Visible exceptions
Broker approval

Fleet example: ID conflict and missing loss history

Working product UI. Illustrative fleet account.

Indem

Built with real operating records

Fan's fleet supplies real records and real data-quality problems.

FleetNexus

Built by Fan for
his rental operation.

Source system / Sep 30

25

vehicles in FleetNexus

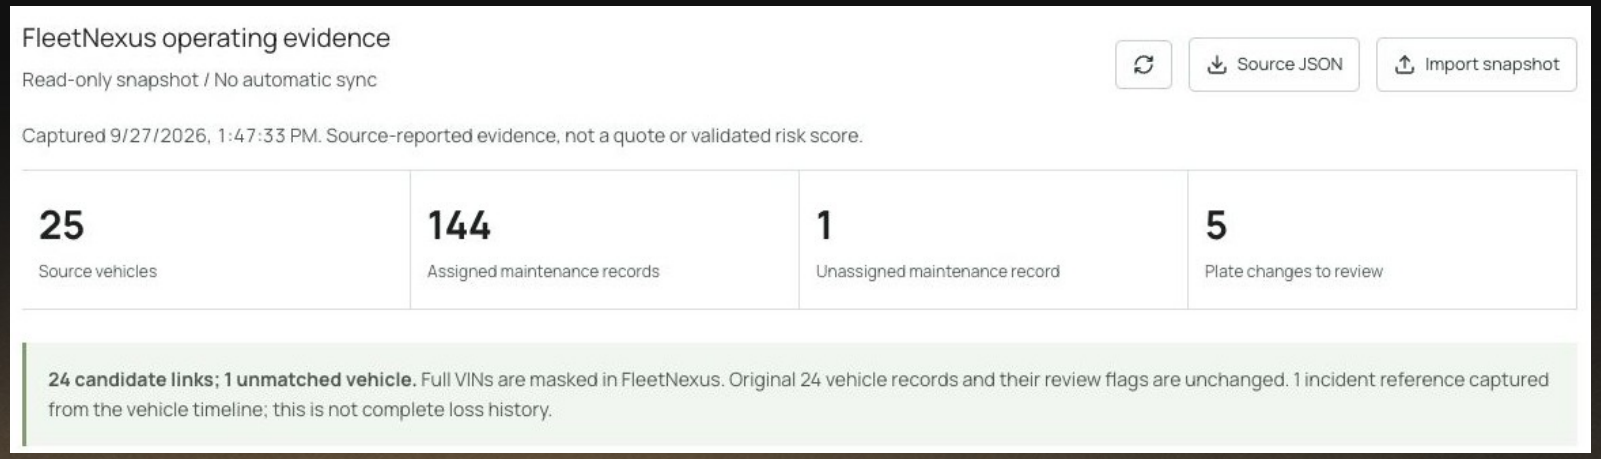

170

maintenance / service records

Indem Risk Lab

145 records imported
5 plate changes to review

Saved snapshot / Sep 27

Read-only import today. The next step is linking reviewed records to underwriting outcomes.

Indem

Evidence from a real fleet

Original records, visible exceptions

24	32	11
vehicles	maintenance records	mileage-review flags
Sources preserved	Exceptions flagged	Reviewable report + JSON

September 27 spreadsheet sample. Original observations retained separately from newer FleetNexus data.

Indem

AI inside the service

Traceable inputs, accountable review

Step	System	Control
Input	Tables, PDFs and images	Preserve originals and sources
Prepare	Parsing + configured LLM extraction	Return fields with source locations
Review	Missing-item and conflict checks	Broker confirms facts for release
Learn next	Permissioned reviewer corrections	Measure accuracy and review time

AI prepares evidence. Licensed brokers review it. Authorized markets price and bind.

Indem

First-principles risk modeling

What actually changes risk?

Selection

Applicants and declines
Evidence and offered terms
Comparable exposures

Controls

Supervision and maintenance
Software and task changes
Observed outcomes

Validation

Loss and exposure histories
Out-of-sample calibration
Uncertainty by risk class

Research roadmap. Validate on matched exposures and loss outcomes before using models for pricing.

Indem

Commission economics at scale

$20,000 annual premium x 10% retained rate

= $2,000 annual commission per account

Placed accounts	Annual premium	Retained commission
1,000	$20M	$2M
10,000	$200M	$20M
50,000	$1B	$100M

Illustrative assumptions, not current economics or a forecast. Operating costs are not deducted.

Indem

Expansion scope

Physical AI first, infrastructure next

Physical AI

Robots and autonomous vehicles

Factories and transportation today
Homes and hospitals in our long-term vision

AI infrastructure

Data centers

Power, cooling and equipment
Property and interruption exposures

Each class needs its own evidence, underwriting appetite and licensed placement route.

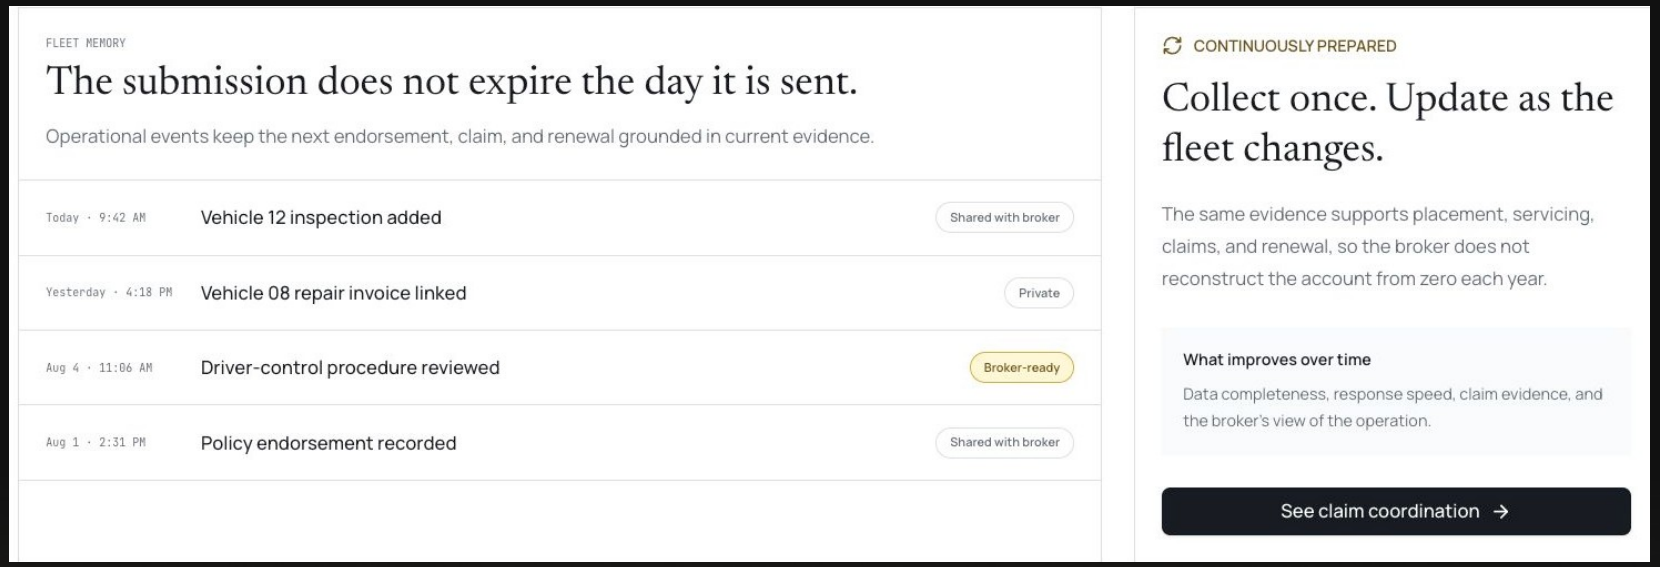

Indem

Operations tracking

A reusable

risk history

Usage, maintenance and changes stay linked to the insured asset.

A continuing evidence record for policy changes and renewals.

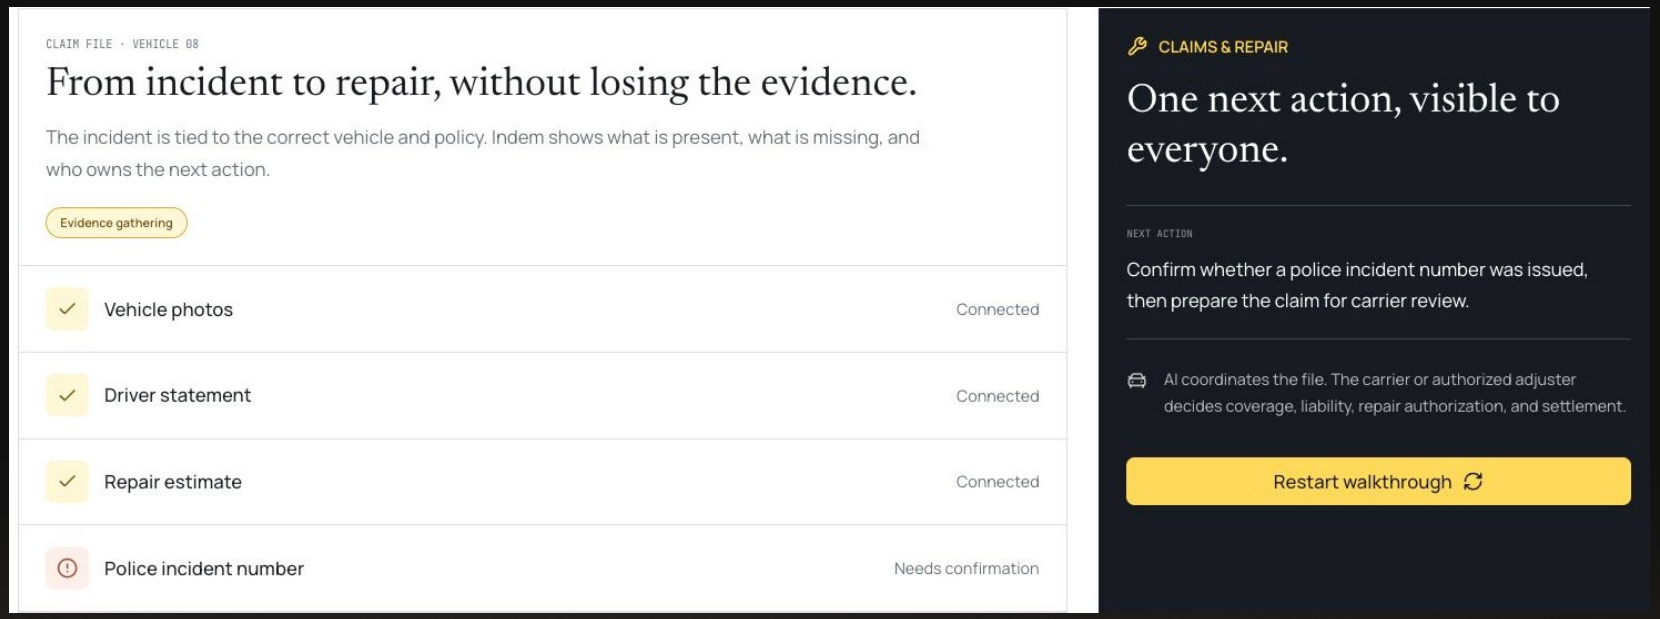

Product walkthrough. Illustrative events. Continuous tracking is in development.

Indem

Claims and repair support

Incident record

Photos and estimates
Missing evidence
Policy-linked case

The carrier or authorized adjuster decides coverage and settlement.

Product walkthrough. Illustrative incident. Claims workflows are in development.
