

AI-native insurance brokerage *for Physical AI*

Helping robotics businesses get insurance to deploy.

Deployment data becomes underwriting evidence.

Yudong Rao / Co-founder & CEO

Pre-seed / San Francisco / October 2026

Physical AI

Founder-market fit

Insurance, AI and economics

Broker partner

Arcadia Insurance Group
14-year family-owned brokerage
Full-service insurance

Robots change after deployment

The insurance file must keep up

1

robot. New tasks. New exposures.

New sites, software and supervision
change what insurers need to see.

The missing operating context

Where and how does the robot work?
Who supervises and intervenes?
What changed since the last review?
What do incidents and controls show?

Risk Passport preserves the operating context behind an insurance submission.

Our product

One living Risk Passport

Underwriting & quoting

Application + source evidence
Broker review and submission
Quotes for eligible risks

Operations tracking

Usage and maintenance
Software and supervision
Evidence for policy updates

Claims & repair support

Incident and repair records
Missing items and next steps
Carrier coverage decisions

Working intake and record imports. Continuous tracking and claims workflows are in development.

Risk Passport in action

Evidence for
underwriting

Source-linked facts
Visible exceptions
Broker approval

Fleet example: ID conflict
and missing loss history

Working product UI. Illustrative fleet account.

AI REVIEW COMPLETE

Two facts need a person.
The agent proposes corrections and keeps the evidence attached. It does not silently rewrite the account.

Vehicle 17 identifier conflict

Fleet schedule ends in ****4K2; repair invoice ends in ****4K7.

Blocks release

SOURCE 1

Vehicle schedule · row 17

SOURCE 2

Repair invoice · page 1

Loss history needs confirmation

The stored loss run does not cover the full period requested for this renewal.

Follow up

HUMAN APPROVAL GATE

AI finds the gap. A person confirms the fact.

This walkthrough applies a reviewed correction and records a request for updated loss runs. No carrier receives data at this step.

Review action
Use the schedule as the verified identifier and open a follow-up task for current loss history.

Confirm reviewed correction ✓

Early commercial traction

Clients and placed policies

5

robotics startup clients

In deployment

20

bound insurance policies

Insurance placements

2

broker partners

Arcadia Insurance Group
Barefoot One

Fleet origin: 50+ opportunities, including 20+ in intake / quoting.

Company-reported, October 6, 2026. Robotics client engagements and policy counts are separate metrics.

Capacity and distribution

A route to underwriting

Koop

Capacity confirmed

Eligible AV and robotics risks
Applications in hand

Zurich

Rental-fleet programs

Program-fit and product
discussions underway

OrionStar

U.S. commercial robotics

Early Risk Passport
design-partner discussions

Arcadia supports broker-led placement. Allianz has invited a data-center fit call.

Koop capacity is confirmed. Each account remains subject to eligibility, licensed access and underwriting.

Go-to-market

Commercial robotics deployments

Customer

Commercial robotics founders
Manufacturers and operators
A defined U.S. deployment

Acquisition

Founder outreach and referrals
Robotics relationships
Broker referrals as we scale

Placement & renewal

Scope the risk and evidence
Submit through licensed routes
Reuse the file at renewal

Initial focus: commercial service and industrial robotics. Review eligibility for each deployment.

Our data advantage

Evidence linked to decisions

Working today

Asset-linked source records
Dated imports and review flags
Reusable underwriting packages

Learning with permission

Human corrections and decisions
Coverage terms and renewals
Exposure and loss outcomes

Economics research: which evidence changes terms, and which controls change risk?

We aim to compound evidence and outcomes across renewals. Risk and pricing models require validation.

Commission-based brokerage

Software drives operating leverage

$$\begin{array}{ccccc} \text{Premium} & & \text{Retained} & & \text{Indem} \\ \text{placed} & & \text{commission rate} & = & \text{revenue} \\ & \times & & & \end{array}$$

On placement and renewal

AI target: less preparation work per account. Track retained commission and cost to serve.

Retained rate is after intermediary splits. Service and acquisition costs still come out of revenue.

Raising pre-seed

Repeatable insurance placements

- 01 Turn robotics deployments into bound accounts

- 02 Automate preparation and measure service cost

- 03 Link evidence to underwriting and renewal outcomes

Funding: angel investment. Raising pre-seed.

Seeking investors who know insurance distribution and real-world AI.

Robotics submission workflow

One deployment, one risk record

A defined use case, a complete evidence file and an accountable review.

Scope	Define the risk	Tasks, site, responsible parties and operating limits
Evidence	Prepare evidence	Supervision, changes, maintenance and incidents
Review	Request terms	Coverage review and terms for eligible operations
Measure	Record outcomes	Quote, bind, retained commission and review effort

Built with real operating records

Fan's fleet supplies real records and real data-quality problems.

FleetNexus

Built by Fan for
his rental operation.

Source system / Sep 30

25

vehicles in FleetNexus

170

maintenance / service records

Indem Risk Lab

145 records imported
5 plate changes to review

Saved snapshot / Sep 27

FleetNexus operating evidence			
Read-only snapshot / No automatic sync			
Captured 9/27/2026, 1:47:33 PM. Source-reported evidence, not a quote or validated risk score.			
25	144	1	5
Source vehicles	Assigned maintenance records	Unassigned maintenance record	Plate changes to review
24 candidate links; 1 unmatched vehicle. Full VINs are masked in FleetNexus. Original 24 vehicle records and their review flags are unchanged. 1 incident reference captured from the vehicle timeline; this is not complete loss history.			

Read-only import today. The next step is linking reviewed records to underwriting outcomes.

Evidence from a real fleet

Original records, visible exceptions

24

vehicles

32

maintenance records

11

mileage-review flags

Sources preserved

Exceptions flagged

Reviewable report + JSON

September 27 spreadsheet sample. Original observations retained separately from newer FleetNexus data.

AI inside the service

Traceable inputs, accountable review

Step	System	Control
Input	Tables, PDFs and images	Preserve originals and sources
Prepare	Parsing + configured LLM extraction	Return fields with source locations
Review	Missing-item and conflict checks	Broker confirms facts for release
Learn next	Permissioned reviewer corrections	Measure accuracy and review time

AI prepares evidence. Licensed brokers review it. Authorized markets price and bind.

Economics research

What makes a risk insurable?

Selection

Applicants and declines
Evidence and offered terms
Comparable exposures

Controls

Supervision and maintenance
Software and task changes
Observed outcomes

Validation

Loss and exposure histories
Out-of-sample calibration
Uncertainty by risk class

Research roadmap: observe underwriting decisions, then test risk models with matched outcomes.

Commission economics at scale

\$20,000 annual premium x 10% retained rate

= \$2,000 annual commission per account

Placed accounts	Annual premium	Retained commission
1,000	\$20M	\$2M
10,000	\$200M	\$20M
50,000	\$1B	\$100M

Illustrative assumptions, not current economics or a forecast. Operating costs are not deducted.

Physical AI and AI infrastructure

Insurance follows deployment

\$975B

Robotaxis + autonomous trucks

Global annual industry revenue in 2035
Goldman Sachs forecast

\$91B

AI data-center insurance

Global cumulative premiums, 2026-2030
Swiss Re forecast

Expansion context, not Indem TAM. The figures measure different markets and periods and cannot be added.

Operations tracking

A reusable

*risk
history*

Usage, maintenance and changes stay linked to the insured asset.

FLEET MEMORY

The submission does not expire the day it is sent.

Operational events keep the next endorsement, claim, and renewal grounded in current evidence.

Today · 9:42 AM	Vehicle 12 inspection added	Shared with broker
Yesterday · 4:18 PM	Vehicle 08 repair invoice linked	Private
Aug 4 · 11:06 AM	Driver-control procedure reviewed	Broker-ready
Aug 1 · 2:31 PM	Policy endorsement recorded	Shared with broker

CONTINUOUSLY PREPARED

Collect once. Update as the fleet changes.

The same evidence supports placement, servicing, claims, and renewal, so the broker does not reconstruct the account from zero each year.

What improves over time

Data completeness, response speed, claim evidence, and the broker's view of the operation.

See claim coordination →

A continuing evidence record for policy changes and renewals.

Claims and repair support

*Incident
record*

Photos and estimates
Missing evidence
Policy-linked case

CLAIM FILE • VEHICLE 08

From incident to repair, without losing the evidence.

The incident is tied to the correct vehicle and policy. Indem shows what is present, what is missing, and who owns the next action.

Evidence gathering

✓	Vehicle photos	Connected
✓	Driver statement	Connected
✓	Repair estimate	Connected
⚠	Police incident number	Needs confirmation

CLAIMS & REPAIR

One next action, visible to everyone.

NEXT ACTION

Confirm whether a police incident number was issued, then prepare the claim for carrier review.

AI coordinates the file. The carrier or authorized adjuster decides coverage, liability, repair authorization, and settlement.

Restart walkthrough ↻

The carrier or authorized adjuster decides coverage and settlement.
